Article history:	Abstract:
<p>Received: November 10th 2022 Accepted: December 10th 2022 Published: January 10th 2023</p>	<p>This article discusses the importance of digital technologies in foreign language teaching, the effectiveness, possibilities and advantages of modern technologies in the process of foreign language teaching, as well as the current demand. In teaching a foreign language, it is essential to create educational and methodical literature based on digital technologies, in which to create unique educational programs taking into account the development of students, information and scientific-methodical education of the educational system. to provide, and develop basic curricula and sample course programs, organize the publication of educational literature, create educational guides and textbooks in various forms of presentations based on information technologies, in the form of virtual resources and the educational process implementation requires solving issues such as methods used in educational institutions, improvement of pedagogical methods using digital technologies and establishment of distance education technologies.</p>

Keywords: digital technologies, importance, new opportunities in foreign language teaching, distance education, advantages of digital technologies

At a time when science and technology are rapidly developing and the importance of innovative technologies is increasing, it is important for every teacher to improve his pedagogical skills, develop the educational process, and increase its quality. It is no exaggeration to say that one of the popular interactive methods is the formation of training using streaming technologies, and it has become one of the modern methods, and innovative technologies have been absorbed into educational processes. Teaching and learning a foreign language on the basis of digital technologies has made a radical change in this field, and as a result, people can continue to work, young people can study, and especially people with health limitations and limited mobility can learn foreign languages. It is not an exaggeration to say that a favorable opportunity was created for them to learn their languages.

E-learning is an educational model that promotes the acquisition of knowledge through platforms or digital environments. Half a century ago, a major discovery was considered effective for 10-15 years, but now new discoveries are being made almost every year, every month, and in every field. At a time when science and technology are rapidly developing and the weight of innovative technologies is increasing, it is essential for every teacher to improve his pedagogical skills, to increase the quality of the educational process, and at the same time, today's widespread interactive One of the methods is the creation of training using digital technologies, which has become one of the modern methods. In teaching a foreign language, it is essential to create educational and methodical literature based on digital technologies, in which to create unique educational programs taking into account the development of students, information and scientific-methodical education of the educational system. to provide, and develop basic curricula and sample course programs, organize the publication of educational literature, create educational guides and textbooks in various forms of presentations based on information technologies, in the form of virtual resources and the educational process implementation requires solving issues such as methods used in educational institutions, improvement of pedagogical methods using digital technologies and establishment of distance education technologies. It is essential to create digital educational and methodical literature for teaching a foreign language, in which to create unique educational programs taking into account the development of students, to provide the educational system with information and the scientific method. , to develop basic curricula and exemplary digital course programs, to organize the creation of educational literature and dictionaries, to establish the creation of

educational manuals, and to use the methods used in educational institutions, it requires solving issues such as improving them and establishing distance education technologies. In order to solve these issues, special courses were organized to improve the knowledge and skills of the teacher, to acquire sufficient knowledge and skills in working with students. Today's advanced pedagogue is required not only to acquire knowledge in his field, but also in a field not close to his field, and at the same time, he should be aware of almost all the latest news and keep up with the times. "Nowadays, science, knowledge and potential are as necessary as water and air in all areas." In this regard, the President's words, "The cornerstone of development and the force that makes the country powerful and the nation great are science, education and training" is a clear example of how this can be achieved only and only on the basis of the indirect participation of the teacher. Among all professions, the teaching profession has special and crucial social importance, this issue is even important at the national level, we can say that these documents can be the basis for this. The target directions of the state policy in the field of education of the Republic of Uzbekistan were determined in the following main documents. A continuous education system was created in the Republic of Uzbekistan, which is the basis of the national model of personnel training. The national model of personnel training is aimed at the all-around development of a person. Man is the most complex phenomenon that exists on earth, and he is an interesting subject of knowledge and self-knowledge. A person is a wonderful result of a unique social and cultural revolution because only a person is capable of self-awareness, self-knowledge and changing the world around him.

In teaching foreign languages, modern technologies, and conditions require not only the use of new technologies in teaching foreign languages but also modern interactive methods and the introduction of the latest innovative technologies by the teacher in the process of teaching foreign languages. The process of organizing classes with the help of electronic educational resources, in which students not only hear but also see, and cognitively accept the knowledge they receive, effectively helps them to understand the ideas and content of various concepts. Today's students prefer to use interactive teaching methods aimed at forming independent and critical thinking. Currently, digital technologies, which have dramatically accelerated the development of our country, have served as an essential factor in learning and teaching a foreign language, especially during the pandemic. As a result, the spread of the language has expanded, the number of foreign language learners has increased, and the interest in learning a foreign language has increased dramatically. Today, teaching and learning have become one of the most urgent issues in the world. It has created the basis for specially created language courses, unique forms of supervision, and distance learning processes, for example, many prestigious educational institutions around the world today. remote learning opportunities have been created in educational institutions, in addition, new opportunities have appeared in learning the German language, for example, learning the German language directly from a native speaker in the German language courses. in addition to this, there were opportunities to submit language certificates recognized in many prestigious educational institutions around the world. In turn, it should be noted that the effectiveness of digital technologies has become an essential factor in the increase in the number of foreign language learners. This is proof that digital technology is relevant and the demand of the times.

It can be understood from this that educated and modern personnel are increasing for our country. Knowledgeable, young specialists who have mastered several foreign languages will bring innovations that meet today's demands to the field of education and implement them in practice. But knowing the legal basis of using digital information and Internet resources is very important for a modern teacher because he can work both as a consumer of electronic resources and as their developer. Using electronic materials within the framework of distance education technologies, the teacher engages students in the exchange of information using local and global networks. It is important for a teacher to know how to legally use the Internet. He must network with his students on an understandable, legal basis, focus their attention on problematic issues, and show examples of competent information behavior.

The penetration of modern information and communication tools into the field of teaching and learning a foreign language has created a completely new system, in line with the times, based on new, modern, digitization technologies, in addition to the methods of teaching foreign languages. This system, which is in tune with the times, convenient for learning, interesting and, most importantly, economical, was quickly accepted by the youth of today and quickly adapted to it. Specially created language courses, unique forms of control, and distance learning processes were created in this regard. This is a very convenient and affordable option for German language learners. In turn, it should be noted that it is no exaggeration to say that this was an important factor in the increase in the number of foreign language learners.

E-learning has become an integral part of almost all educational processes in our country, including professional development, teaching and learning a foreign language, distance learning of language certificates, distance learning, and even distance seminars, it is not an exaggeration to say that it has found a strong place in the holding of meetings, the opportunity to study without leaving home - the opportunity for people living in remote villages to go to the big cities and study at the university or in the prestigious universities of the world without going there education is not always possible. Distance education technologies allow them to study without leaving their hometown. It made it possible to study, learn a language, improve skills, and participate in conferences without interruption from study and work activities, which is especially useful for those who get advanced skills, foreign language studies or second higher education. Teaching and learning by relying on interesting, high-quality and, most importantly, cost-effective methods for mastering high-quality technologies and educational material. In addition, one

of the most praiseworthy objects is the impartiality of evaluation: distance education technologies improve the quality of knowledge. continuous monitoring, evaluation of results, and impartial automated evaluation free of human factors provide for the loss of material interest in places. We can say without hesitation that information technologies and their importance in the educational process are becoming more effective, and relevant and creating great opportunities in my life today.
