<b>Article history:</b>	<b>Abstract:</b>
<b>Received:</b> January 11 <sup>th</sup> 2023 <b>Accepted:</b> February 11 <sup>th</sup> 2023 <b>Published:</b> March 24 <sup>th</sup> 2023	In this article, as a result of the reforms carried out in the spiritual and educational sphere in our country today, it is necessary to educate selfless and patriotic young people with a high morale, a firm life position, a broad worldview, to protect them from the influence of foreign ideas, to develop national and loyalty to universal values, religious tolerance and education in the spirit of inter-ethnic harmony are expressed.

**Keywords:** spirituality, culture, patriotic spirit, education, upbringing, youth, nation, value, tolerance.

**INTRODUCTION.** The essence of development depends on the level and level of maturity of the existing socio-spiritual environment. In a society with a high level of spiritual development, you know that the intellectual potential of people living in this environment will also be high. There is no great future without spirituality, high spirituality calls people to be powerful. The future of the country will be the way people think. As this investment goes into circulation on a wider scale, the harvest will be more fruitful, the position of Uzbekistan in the world community will increase, and the Uzbeks will gain the glory worthy of their ancestors. Therefore, today spirituality has become a priority area in state policy and it has started to show its positive results.

### **METHODS**

President of the Republic of Uzbekistan Sh. Mirziyoyev "On the measures to bring up young people to be spiritually, morally and physically perfect, and to raise the quality of their education system to a new level", No. PQ-3907 the following priority directions, including a number of tasks defined in the decision, to bring up young people with spiritual, moral and physical maturity, to raise the quality of their education system to a new level the program of comprehensive measures was approved. It includes "educating selfless and patriotic young people with high morale, a firm life position, and a broad outlook; protecting young people from the influence of foreign ideas, educating them in the spirit of loyalty to national and universal values, religious tolerance and inter-ethnic harmony; "increasing the value and prestige of pedagogic staff, strengthening their material, moral and social protection" was put on the agenda[1]. In fact, there are a number of reasons why spirituality has become a priority area today.

### **RESULTS AND DISCUSSIONS**

They consist of the following: firstly, the fate of all the tasks performed in the society is related to the growth of thinking and consciousness of the people living in it. It is impossible to achieve the intended goal without changing their mind and thinking based on the nature and interest of the tasks they want to perform. In this sense, spirituality is an important mechanism for changing the life of society, and any country prioritizes its development based on its goals and interests. secondly, in the first years of independence, the struggle against any ideology in general began under the banner of renouncing the former Soviet ideology. This, in turn, began to have a negative impact on people's spirituality and values. Especially in the press, some scientists began to put forward the opinion that it is necessary to form economic thinking first of all, and spirituality arises on the basis of this economic thinking. As a result, in the psyche of people, one-way departure again began to take the leading place in the lifestyle. In turn, no matter how much we talk about national interests or patriotism, it did not produce the results we expected, but began to serve to give priority to personal interests in people. The emergence of such a negative process is dangerous for building a new society; thirdly, the majority of people were confused by the economic problems that arose in the early years of independence, which in most cases caused the danger of young people going to the market and trying to earn money rather than getting an education, learning a profession, and taking an interest in art and works of art. . It is true that earning money and strengthening the economic possibility of one's life is a vital need and necessity for every person. But this need should not conflict with the interests of the individual and nation's development, and should not lead to their spiritual impoverishment. It is necessary to prevent this dangerous process. fourthly, another reason for the priority of spirituality in state policy is that regardless of whether the nation is large or small in terms of numbers, it is a real

subject, a creator and consumer of certain material and spiritual wealth, which cannot be found in others. , the existence of its own characteristics and factors such as having its own independent place, i.e. restoring its status as a true nation, were raised to the level of a vital need. Its solution is of practical importance for the future of the nation and the state. fifthly, Uzbeks are a nation that has made a great contribution to world civilization. His achievements in the fields of spirituality, science, and culture have been serving the peoples of the world for centuries. But during the Shura system, great efforts were made to "remove" these achievements created by their ancestors from the minds and hearts of the Uzbek people. In the conditions of independence, it was necessary to restore it, restore its rightful and just place in the world civilization. This can be achieved only through the development of spirituality. sixthly, spirituality is a huge "mechanism" that organizes the nation and the entire population of the country around the state towards certain goals, activates them, convinces them of a bright future, glorifies the human race, and expresses its value. State policy on the development of spirituality of the First President "High spirituality is the foundation of the future"; "Power is in knowledge and thinking"; It was carried out in accordance with the conceptual ideas of "high spirituality - invincible power", and today it is continued by the head of our state Sh. Mirziyoyev based on the concept of "from national revival to national rise". The development of spirituality is rising to the level of the main task at the current stage of the development of our country and nation. This is not only related to the internal life of our country, but also related to the existence of various external currents that try to threaten its stable development. Education of free-thinking, selfless patriots who can resist their efforts to poison the minds of our young people, especially those who do not have life experience, requires the development of spirituality at a high level. If it is based on these tasks, today it is necessary to develop spirituality in the following directions: first, to get rid of the remnants of the violent and submissive mentality of the former Soviet totalitarian regime.

### CONCLUSION

To do this, to bring out the inner spiritual potential of every person, to ensure freedom of thought, to create the possibility of each person to create his own destiny and future, and to form his mentality; secondly, to develop the mindset of independence in each person, to be proud of belonging to the Uzbek nation, to take possession of all the material and spiritual wealth created by their ancestors, and to strengthen the spirit of self-sacrifice in involving them widely in the country and national development; thirdly, to develop the process of realizing national identity in each person, to show self-sacrifice for the interests of the Motherland and the nation, to oppose any actions that undermine the country's and national development, political, social and international stability, and religious tolerance - achieving political and civic potential; fourthly, to create conditions for every person to seek knowledge, to enjoy the achievements made in the field of science, technology, and technology in our country and the world, to achieve the spiritual and spiritual potential of Uzbekistan, such as being proud of the strengthening of its influence in the world in directions. The formation of such potentials in every citizen living in our country, especially in our youth, is the main criterion for general spiritual growth. As President Sh.M. Mirziyoyev noted, "As a result of comprehensive reforms and creative work being carried out in our country, our people's thinking and worldview are changing. In our country, the importance of the life-giving idea "From national revival to national rise" is increasing more and more in the establishment of a legal state and civil society" [2]. The main factor behind such positive indicators is the policy aimed at spiritual growth in our country.
