

THE PROCESS OF INTEGRATION OF HIGHER EDUCATION IS THE NEED OF THE TIME

Khilola Ruzmetova

Associate Professor of Tashkent State Pedagogical University, PhD.
Tashkent, Uzbekistan

Article history:	Abstract:
Received: April 6 th 2023 Accepted: May 10 th 2023 Published: June 11 th 2023	The article analyzes modern research methods of modern education and their theoretical aspects.
Keywords: Pedagogy, methodology, research methods, analysis, research.	

The ultimate goal of reforms in the field of higher education is to train mature specialists in their field. Based on these requirements, expanding the scope of higher education, improving the quality of training of highly educated specialists is the essence of the activity of any educational institution. At the initiative of the President, a new approach was formed, such as the development of public-private partnership in the field of higher education, the creation of a competitive environment in higher education by organizing the activities of state and non-state higher education institutions in the regions, as well as the activities of branches of prestigious foreign higher education institutions, attracting investments. As a result, special attention is paid to the development of STEAM courses (exact sciences, technology, engineering, creative arts and mathematics) in accordance with world standards. This has increased the efficiency of the processes of integration of our graduates into the world community.

In this way, the process of introducing the system of independent determination of the admission parameters on the basis of payment-contract by the higher educational institution, based on the strength, scientific potential and other main indicators of the higher educational institutions, has begun.

Significant positive changes are taking place in the field of higher education - the appearance of HEIs is changing and the material and technical base is improving. On the other hand, it should be noted that the financing of scientific developments and social support are being strengthened in them, including that the income of professors and teachers is increasing.

Today, the legal and normative foundations of the development of the educational system are being improved. The adoption of the Law "On Education" on September 23, 2020 was a historic event. In accordance with the law, distance, inclusive forms of education were introduced, educational organizations were allowed to establish joint faculties and educational centers with foreign institutions. Also, teachers were given the right to freely choose the author's program and teaching methods, modern pedagogical forms, teaching and training methods.

The orientation of the higher education institution to intensive development implies many private changes. All these changes need to be coordinated, form a whole, otherwise their effectiveness in terms of the final result will not be as expected. The implementation of such an approach to the development of a higher education institution requires systematic management. Establishing progressive management is an important factor in the progressive development of a higher education institution today.

Priority was given to improving the quality of education, training competitive personnel, effective organization of scientific and innovative activities, development of international cooperation on the basis of ensuring the solid integration of science, education and production, based on the needs of the social sphere and economic sectors of the higher education system. At the heart of these reforms are the goals of increasing the intellectual potential of the young generation, forming them as competitive personnel, and turning them into active participants in today's global world.

A new approach to the commercialization of the results of education, science, innovation and scientific research in higher education institutions is required to increase the effectiveness of scientific and research work in higher education institutions, to involve young people in scientific activities.

The educational system formed in the early years of independence did not aim to develop innovative activities. However, in today's rapidly developing world, achieving scientific and innovative activities of professors, researchers, doctoral students, master's and bachelor's students in technological parks has become a vital issue. The position of vice-rector for scientific affairs and innovations was introduced in higher education institutions. To introduce mechanisms to support them in the publication of articles in prestigious international scientific journals, to ensure the gradual inclusion of scientific journals of higher education institutions in Scopus, ScienceDirect and other international scientific and technical databases, to develop new high-potential commercialization based on start-up projects at the expense of extra-budgetary funds by creating products and techniques-technologies, in the presence of higher educational institutions,

the tasks of establishing enterprises engaged in the implementation of scientific-research results into practice were assigned.

Reforms in the field of higher education today serve to improve this system with their relevance and practical importance.
