Article history:	Abstract:
Received: 11 th February 2021 Accepted: 28 th February 2021 Published: 18 ^h March 2021	The article considers and analyzes the formation of patriotic culture, skills and experience in educating future lawyers in the spirit of patriotism, education of the system of patriotic values, historical approach, continuity, state-patriotism and humanism-professional orientation
Keywords: patriotism, culture, skill, experience formation, value system, upbringing, historical approach, continuity.	

The Strategy of Actions for the Further Development of the Republic of Uzbekistan identifies areas such as educating loyal youth, deepening democratic reforms and increasing their social activity in the development of civil society, in this regard, it is important to develop a sense of patriotism of future lawyers in educational institutions.

The changes taking place in our country put on the agenda the training of physically healthy, morally pure, spiritually mature professionals with intellectual potential that will serve the development of society. The most important thing in our country is to train people who are morally clean, loyal to their profession, highly skilled and intellectually capable, who can sacrifice their lives for the Motherland and its people, who are not afraid of difficulties, who can withstand all the difficulties in serving the Motherland. In solving this pressing problem, the development of a sense of patriotism of future lawyers, the education of social activism in them today, along with professional skills, also includes intellectual potential.

In this regard, the Law of the Republic of Uzbekistan "On additional measures to improve the system of military and patriotic education of adolescents and training of personnel for the Armed Forces and Civil Service of the Republic of Uzbekistan" and to strengthen the legal framework of state youth policy made.

Deep respect for the spiritual and enlightenment values of our people, its culture and traditions, the formation of personality traits such as honesty, conscience, patriotism, loyalty, devotion, as well as national pride, the history and rich culture of our people, first of all, Amir Temur on the basis of the invaluable heritage, the heroism of our contemporaries who sacrificed themselves for the freedom and prosperity of the Motherland, aimed at educating young people who are loyal to the people of Uzbekistan, have a strong outlook on life and an active civil position.

The problem of patriotic education of future lawyers has become one of the most pressing issues, and its special importance is explained by the fact that it is at the epicenter of a number of other problems affecting its interests. For future lawyers, patriotism is a key component of professionalism. Ultimately, the well-being of citizens and the quality of professional activity, which determines the legitimacy of society, largely depends on the level of its formation. However, among future lawyers, having such an important quality as patriotism must be brought to the level of professional culture, which requires the subject's position, cultural and historical heritage, creative ability, new professional values in his work and thus enrich the culture .

Therefore, the patriotic culture of future lawyers requires not only the formation of knowledge, skills and experience, but also the acquisition of a system of patriotic values and, most importantly, the ability and readiness of these values at a professional level. It enriches and protects them in society as well as in professional activities and daily life.

A complex and multifaceted patriotic culture does not emerge spontaneously as a result of self-education. It should be formed during the period of professional training of future lawyers and this is directly important in the process of their professional activity. It is the real experience of professional activity that helps to acquire a professional and patriotic culture through the final formation of the value area of the individual, enriching the indicative basis of action, strengthening the professional orientation.

At the same time, the structure of the activities of future lawyers includes conditions for the formation of a patriotic culture: the special status, form, attributes, titles of the officer, the strict observance of his professional activity, the expression of respect for the norms of the law and the law, the taking of oaths, and so on.

The issues of patriotic education have been widely discussed in the course of scientific research, of which N.K. Goncharov, N.V. Ippolitova, V.I. Lutovinov, IS. Marienko et al.

N.V. Ermolenkova and A.C. Ribbchincuks on the study of patriotic education of servicemen and law enforcement officers. On the surface of aspects of professional culture, V.K. Belolipetskiy, V.G. Ignatova, M.S. Kagan, A.B. Kiryakova et al.

The importance of research in the study of the problems of formation of patriotic culture is very high, but nevertheless, the problem of formation of patriotic culture in the professional activity of future lawyers remains poorly studied.

Thus, at the socio-political level, the growing demands on the quality of professional activity of future lawyers; at the socio-pedagogical level - the need to form a patriotic culture among future lawyers; at the scientific and theoretical level - the need to develop a theoretical basis for the formation of patriotic culture among future lawyers; at the methodological and technological level - the need to develop an appropriate technological apparatus for the effective formation of a patriotic culture among future lawyers in their professional activities.

Formation of patriotic culture of future lawyers is carried out in accordance with the pedagogical system in their professional activity, which includes motivational-targeted, content-activity, organizational-methodical and diagnostic-corrective components, developed on the basis of systematic, integrated-activity and cultural approaches, performs situational-formative, formative-developmental, information-communicative, information-mobilizing, predictive-activity functions that ensure the stability and successful development of the system of formation of patriotic culture among future lawyers, acceptability, structure, functionality, integration, intra-system dialogue, flexibility, characterized by inactivity.

It is carried out taking into account the following principles - the specific historical approach to education, continuity, state-patriotic and humanitarian-professional orientation, demanding of subordinates with care for them; taking into account the specifics of the process, a set of pedagogical conditions for the effective operation of the system will be identified and implemented, creating a practice-oriented educational environment that encourages patriotic activities, expanding the educational impact of traditions and ceremonies to enter ”.

All this allows us to conclude that the work on the formation of a patriotic culture remains necessary in modern conditions. In solving the problems of patriotic education, it is important that the professional activity of future lawyers has a high enough potential and make full use of them.
