Article history:	Abstract:
Received: 21 th March 2021 Accepted: 3 th April 2021 Published: 18 th April 2021	In this article, an important issue in the formation of the younger generation and highly qualified personnel, namely the development of science, the attitude of young people to the national heritage and the importance of education arising from modern requirements.
Keywords: Education, upbringing, spirituality, perfect man, philosophical, legal, artistic, moral, religious ideas and modern educational concept.	

The people of Uzbekistan have seen a lot, borne the test of history on their shoulders, wished peace and prosperity to themselves and others, and made a worthy contribution to the development of human civilization. Our homeland is the cradle of great scientists and thinkers. Al-Bukhari, Burhanuddin Marghinoniy Is o -Hakim al-Tirmidhi, Mahmoud al-Muhammad Bahauddin Kaffol, Khoja Ahrar Wali Muhammad al-Khwarizmi, Abu Raihan Beruni, Abu Ali Ibn Si, like no, Mirzo Ulugbek, Alisher Navoiy our great thinker ancestors made a significant contribution to the development of world civilization.

Republic of Uzbekistan p b chaired by President of Uzbekistan Shavkat Mirziyayev "upbringing of the young generation always been an important and urgent importance. But we live in the twentieth century, I at this issue really becomes a matter of life and death ... "brought many people are perfect, so happy to live," says the wise. In order for education to be perfect, there must be no gap in this matter . " [1]

Focus on education - focus on the future. Any potential consciousness of the youth of the country, the development of modern science I say, in other words, the intellectual potential of franchising high.

Today, the achievements of science and technology has become the geographical and strategic potential of the country and the whole world, from the globalization of human geography at a time when the state is the most important factor . On the one hand, the acceleration and creative work of modern high-level production, on the other hand, the organization of strong ideological immunity against the threat of various alien ideas and ideologies, the expression of the vital potential of our national mentality are fully realized due to young people becoming full and mature professionals. The basis of control of the education and upbringing system is that the people, the nation, increase and enrich their knowledge over the years. This is because knowledge is the basis of the requirements of the purmano system of thought , such as "seek knowledge from the cradle to the grave," as stated in the hadith .

The inculcation of these qualities in the minds of the modern young generation is one of the most pressing problems, both pedagogical and psychological, coaching complex, multifaceted and long-term. Successful resolution of these problems places a separate responsibility on both the educator and the learner. The educational process is an extremely complex field. The character, manners, attitude to the profession, devotion to national traditions and respect for enlightenment, i y mony and pure conscience , which he has accumulated throughout his life, give him the opportunity to be an educator .

In his congratulatory message to teachers and coaches of Uzbekistan on September 31, 2017, President of the Republic of Uzbekistan Shavkat Mirziyoyev said, "As we think about solving complex and important issues facing our rapidly changing lives today, their solution lies in education, modern knowledge of young people. , we are once again convinced that it is connected with the formation on the basis of high spirituality and enlightenment [2] ". Young people's enthusiasm, perseverance, consistency, and aspiration for great goals depend on the richness, content, and level of confidence in their future knowledge and spiritual world. A spiritually poor person will never be able to acquire knowledge with inspiration and upliftment, to work, he will never get out of the whirlpool of daily life, he will not see the future. Educated individuals, these are our historical roots. If a person wants his knowledge and level to be mature, he must study the history of his people, their philosophical, legal, scientific,

artistic, moral, religious and other ideas, their specificity . On this basis, a new generation will be formed, a spiritual world of a new, full-fledged, meaningful profession.

The modern concept of education, which emerged in the coming years of our new independent state, envisages, on the one hand, the comprehensive and harmonious development of the individual, and, on the other hand, ensuring full, physically developed and mentally healthy health from the first step in family life. Man differs from other beings in that he possesses conscious thinking, knowledge, intellect, the ability to feel and comprehend the universe, and spiritual qualities. In secular thinking, man is valued as an invaluable trait in terms of intellectual ability, intellectual potential, and creative ability. In mystical philosophy, however, it has its own definition. In particular, the Qur'an says, "We created you with honor." In our view, it is this sanctity that is directly related to the intellect, thinking, feeling, and feeling that is not given to any other being other than man. Only man is given the opportunity to think, to react, to understand the world, to understand the meaning of life, and to enrich it. In our view, knowledge, intelligence is determined by the same aspects. If young people are able to control their emotions and passions and turn them to the good with the guidance of the mind, the opposite of the above situation will be social development and prosperity. "

During the years of independence of our country, one of the greatest tasks of our state has been to educate a spiritually mature person, to bring up a new generation that will realize the idea of national awakening. It is known that the spiritual wealth of a person, especially a teacher, is assessed by his worldview, ability to think deeply, to be able to react to events in a timely manner. "The origin of all evil is ignorance," said the great Greek philosopher Socrates. Therefore, we are all responsible for our youth to have high knowledge and thinking.

If a teacher knows his subject perfectly, he can teach it to students in simple language . During the course, teachers of higher education should be aware of the politics, economy, legal norms , underground and surface resources, environmental conditions, cooperation of this society with neighboring and distant countries, and keep pace with the times. To do this, it is necessary to regularly read the news in the media . During the lessons, educational classes that use the following events in the former. "Greet one another with a holy kiss." "Believers have six rights to each other: to greet, to reply, to see when they are sick, and to bury them when they die."

The above exhortations make the teacher's inner appearance beautiful with the purity of his faith and conscience. He's the beauty of students to love because of a di and education of children, and the heart of the student's breath. Man is essentially a creature doomed to self-improvement, self-development, in other words, man needs to live 101 years and be educated for 103 years. Perfection and maturity belong only to the high spirituality inherent in man, the highest status of morality. Spirituality is the flower of human life. It is one of the most important factors that determine a person's honor, dignity, and prestige among the public in all circumstances.

Spirituality is the wing of the human hand. It is the symbolic pillar of his free and free flight, of his power to conquer the highest peaks . Spirituality is the power that saves a person from superstition and ignorance. Through the spiritual stability of individual people, the spiritual image of a whole society is formed. In a word, spirituality is an invincible force, an incomparable power that moves society through a fully mature man. It must be emphasized that perfection , maturity, spiritual and spiritual maturity are the source of all goodness and virtue. The basis of education is upbringing. Once they are accepted as students, changes in their manners and attitudes begin to appear, as we have seen in our many years of experience.

At the age of 18-19, when the student is reaching physical maturity, he begins to build himself, to look at everything in life independently, to manage his own material income. But as the experience of life lags behind physical maturity, the daily attention and influence of the father and mother during this period becomes of great importance. In such a period, when young people are left out of the influence of education, it is more important than ever to put it in the right direction, to think seriously, to be rich . At this time , we have studied and promoted the pedagogical views of some coaches . But the folk pedagogy, which has its roots in thousands of years, the forms and methods of education, which are not written in books, have been completely ignored. The genius of wisdom is the people, and the wise are the children of this nation.

Today the whole world knows that we live with great ideas, great goals, good intentions. If each of us, without haste or haste, deeply studies those ideas and acts in accordance with our intellect and abilities, the path of all arbitrariness, dishonesty, and religion will be blocked. All it takes is a clear conscience. We need to think more about our future, its content and its image. What should we do for future doctors to become mature people, to study well, to live, to be the successors of our work!

Our main task today is to solve this problem. From the point of view of dialectics, even in the upbringing of students, when combined with kindness, openness, striving for the formation of good qualities, demanding, with some reasonable rigor, sufficient results are achieved in moral education. It has been tested in folk pedagogy.

"It is necessary to create the necessary environment and conditions for the promotion of the rich history of our country, its unique culture and national values, the achievements of world science and literature among young people" [3] - said President Shavkat Mirziyoyev.

During the years of independence, Uzbekistan has also launched a comprehensive work based on the experience of developed countries. It is important to note the major changes in education reform . The meaning and content of the reforms in the field of education and upbringing are, first of all, to open a wide way for the formation of talents and abilities in young people, to open a wide way to the level of education. The results of the work in this regard have been noticeable.

In order to ensure a bright future for the new Uzbekistan, the main issues of state policy are to bring up a well-thought-out, educated, both physically and spiritually mature and harmoniously developed generation.

The first President of the Republic of Uzbekistan, Karimov "Historical heritage of scientists and thinkers of the medieval East, its role and importance of modern civilization" in his speech on "historical, cultural and intellectual heritage preservation and enrichment, as well as to increase the unib- Any state and society that does not pay enough attention to educating the younger generation in the spirit of national and universal values, does not aim to develop a harmoniously developed, independent-minded person with its own views and approach, civic position, is excluded from the path of history and development. are doomed to come, we are well imagine and well understand " [4] said that.

Therefore, the formation of the above-mentioned qualities, or in a word, helps to shed light on the essence of the issue, which needs to be paid more attention in shaping the national and spiritual image of today's youth.

In our society, the constant raising of the spiritual and enlightenment level of the population, especially our young girls, is of paramount importance. [5]
